

Immune Science – We live in a post-industrial world, but we have pre-industrial bodies. Our bodies are assaulted by toxins in the air we breathe, the food we eat, and the water we drink. The world has changed around us to include constant, common toxins, but our bodies haven't kept up. Orenda's Immune Science products were developed to help detoxify the body and support the immune system.

Orenda Immune:

Orenda Immune™ Formula is a concentrated form of the Orenda Immune™ Proprietary Blend found in all of the Orenda All in One Products. Orenda Immune™ is recommended to people who want additional immune system nutritional support* and for people who are focused on healthy living.

Orenda Immune™ Proprietary Blend:

Orenda Immune™ contains a powerful blend of special ingredients designed to support the detoxification of the body.* But what exactly composes this blend, you ask. Well, Orenda International answers: three key components are what make this product so uniquely powerful

Calcium D-Glucarate:

Calcium D-Glucarate is the patented form of Glucaric Acid. Calcium D-Glucarate is a botanical extract that is found in cruciferous vegetables such as brussel sprouts and broccoli, as well as in fruits such as grapefruits, apples, oranges and grapes.

Beta 1,3 Glucans:

Beta 1,3 Glucan is obtained from a standardized extract of the avena stavia plant.

Muramyl Peptides:

Muramyl Peptides consist of a non-toxic purified extract from the bacterial cell wall of gram-positive bacteria. *

The Baby Boomer generation has embraced the philosophy that growing older shouldn't mean becoming less active or less attractive. At Orenda International, we have developed two unique and effective AntiAging products to meet those needs. We're proud to offer O-Tropin and AntiAging Serum to anyone who wants to meet the challenges of aging head on.

O-Tropin

O-Tropin contains a careful blend of natural aminos and herbs, in our unique delivery system.

Certain amino acids and vitamins are provided to support healthy and normal pituitary function.* O-Tropin is recommended to anyone over the age of thirty who is serious about enjoying the prime of life. What makes Orenda's O-Tropin different from other products is that it includes Orenda's exclusive 3rd Generation Aminosome™ delivery system.

Aminosome™ Technology

Aminosomes are tiny lipophilic bubbles that we fill with beneficial amino acids and herbs that help deliver the active ingredients in O-Tropin to their intended destinations.

"I feel better now than I did ten years ago, and I am the mother of four pre-teens, three of which are triplets. I think that says it all."

Cindy Tuck

Penngrove, CA

AntiAging Serum

Orenda's AntiAging Serum includes important moisture binding skin nutrients and skin conditioning agents encapsulated and delivered by Orenda's advanced Perflorosome™ Technology.

Those Perflorosomes are suspended in an oxygen rich emulsion made of Perflurodecalin.

Perflorosome™

A Perflorosome,™ due to its small nanometer sizing, has the ability to penetrate deep into the outer layer of the skin.

Use this silky smooth AntiAging Serum alone, or under your regular skin care regimen.
